Equity Research Report

Uno Minda

Expanding to Capture Opportunities

About the Company

Uno Minda Limited (formerly Minda Industries Limited) is a leading global manufacturer of proprietary automotive solutions and systems supplying to OEMs as Tier-1. The company has made important contribution to the automotive industry supply chain for more than six decades with its innovative products. Incepted in 1958, it is one of the leading manufacturers of automotive switching systems, automotive lighting systems, automotive acoustics systems, automotive seating systems and alloy wheels.

The company designs, develops and manufactures switches for 2/3 wheelers and off-road vehicles. In addition, the company manufactures batteries for 2/3/4 wheelers and off-road vehicles. The company enjoys more than 70% market share in the 2/3-wheeler segment in India and is amongst the top few globally. It has established 8 state of the art facilities spread across the length & breadth of India and one in the ASEAN region and employs more than 2800 people.

Through its manufacturing setup in India, Indonesia, Vietnam, Spain, Mexico Colombia, Germany and design centers in Taiwan, Japan & Spain, the Company made significant contributions to the automotive industry supply chain.

Key Highlights:

- Group revenues grew by 14% to ₹5,056 crores; consolidated revenue increased by 19% to ₹4,184 crores in latest quarter.
- Anticipated strong consumer demand for new SUV launches and evolving EV ecosystem, though price sensitivity and interest rates remain concerns.
- Focus on enhancing EV-related product offerings, with revenue from EV two-wheeler OEMs at ₹238 crores.
- For FY2025, the company has planned an ambitious capex of ₹1300-14000 crore. This expenditure is primarily aimed at greenfield expansions.
- Plans to expand capacity in the aluminum die casting plant in Hosur from 11,000 tons to 15,000 tons.
- Construction progressing for new Greenfield plant at IMT Kharkhoda (120K wheels per month) and 2 million alloy wheel plant for two-wheelers at Supa, Maharashtra.
- Total capital expenditure, including land bank, for the 9-month period was Rs. 1,324 crores, with Rs. 340 crores spent on land bank.
- Targeting EBITDA margins of 11% plus/minus 50 basis points, with expectations for improvement as new capacities come online.
- Net debt as of December 2024 was Rs. 1,964 crores, compared to Rs. 1,319 crores as of March 31, 2024.
- Increase in income tax exemption limit to 12 lakhs is expected to boost private consumption and positively impact automotive demand.
- Government focus on enhancing both supply and demand for the EV industry through various schemes and incentives.
- The commercial vehicle segment continues to face sluggish demand, affecting overall production volumes.

Management Commentary:

Management conveys optimism about the medium to long-term outlook of the domestic auto industry, driven by innovation, sustainability, and a favorable economic environment. They highlight Uno Minda's strategic positioning through continuous investment in R&D and key resources to capitalize on growth opportunities, indicating a confident outlook.

Uno Minda

Global Economy

The global economy growth is expected to remain sluggish, inflation is coming down, but risks from geopolitical tensions, trade wars, and financial market uncertainty remain. New tariffs and trade restrictions could disrupt global supply chains, investment. Conflicts in the Middle East and Ukraine could spike oil and gas prices, hurting energy-importing nations. US dollar appreciation may cause capital outflows from emerging markets and the central bank divergence in monetary policy. This uncertain policy change affect the global capital flow. Also emerging economy face uncertainty due to external risks like US interest rates, global trade policies, and commodity price volatility.

In emerging market supply disruption could create inflationary pressure. Future outlook of the IMF in short term growth stable countries must control inflation with economy recovery and medium-term slower growth due to demography change and trade fragmentation.

The world economy is to continue growing at 3.2% during 2024 and projected to 3.3% in 2025 and 2026, A slight acceleration for advanced economies—where growth is expected to rise from 1.7% in 2024 to 1.9% in 2025 and 1.8%in 2026. While Emerging & Developing economies posted growth of 4.2% in 2024 and projected 4.2% in 2024 and 4.3% in 2025. With the eurozone expected to rebound from sluggish performance.

Global headline inflation is expected to decline to 4.2% in 2025 and to 3.6% in 2026. Advanced economies are returning to their inflation targets sooner than emerging and developing markets.

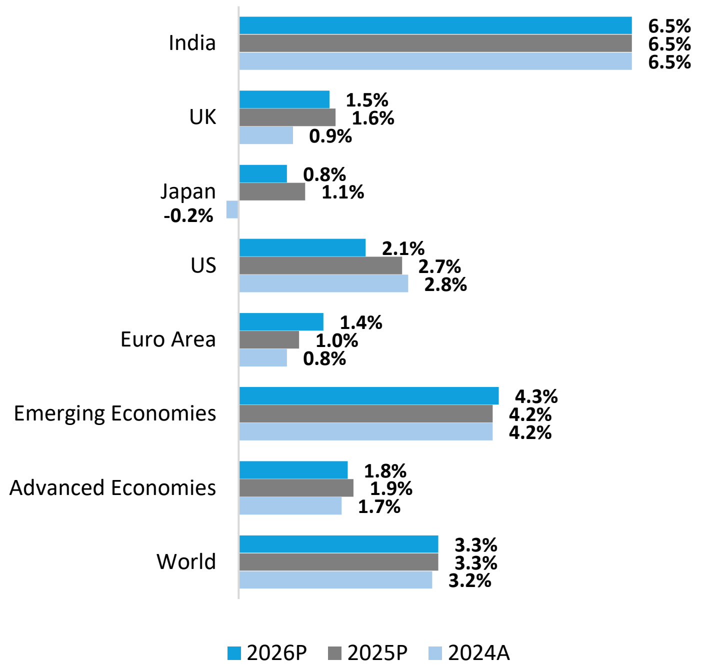
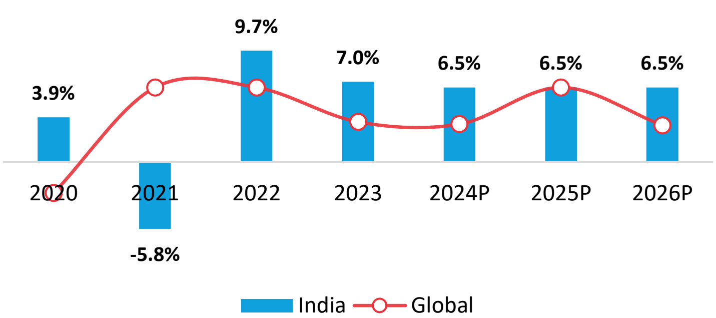
Global GDP Projections



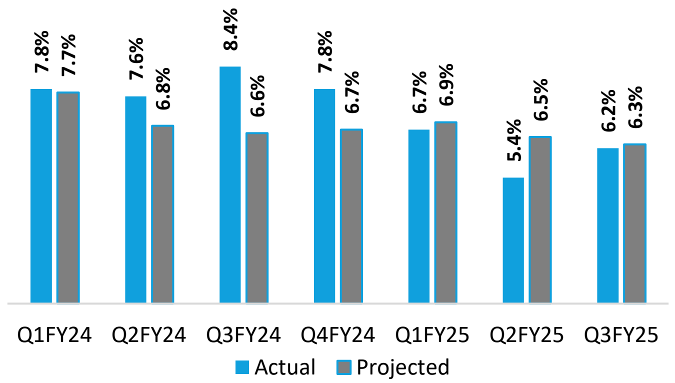
Source: IMF WEO

India vs Global GDP Growth (%)



Source: Statista

India GDP Quarterly Growth - Actual vs Projected



Source: Investing.com

Indian Economy

The Indian Economy despite some moderation in growth over recent quarters, India remain resilient. The IMF project growth of 6.5% for both 2024/25 and 2025/26 – outpacing global growth of around 3.2%. Inflation in India has decline within the RBI's tolerance level of 2-6%, food price counties to create volatile. while the current account deficit remains well contained at just 0.7% of GDP, supported by strong growth in service exports. India's digital public infrastructure, strengthened corporate balance sheets, and overall financial health position the country well for continued growth and social welfare gains.

Indian economy face domestic and external challenge. On the external side, the IMF includes a specific analysis showing that if the world divides into separate economic blocs with restrictions on high-tech and energy trade, India could face a cumulative GDP loss of 1.5%. If tensions increase further with increased non-tariff barriers and reduced FDI flows between blocs, this loss could reach 3.3% of the GDP. Also Oil price volatility – particularly from regional conflicts – could impact both India's external balance and fiscal position.

In February 2025, RBI cut the repo rate by 25 basis points to 6.25% marking first rate cut after 5 years. The aim is to stimulate economic growth and make loan more affordable, bosting the sector like real state and automobiles. However, challenges such as currency depreciation and inflationary pressures remain. The RBI has committed to maintaining durable liquidity, with expectations of further rate cuts to support economic recovery.

Country's ambition of becoming an advanced economy by 2047 will require addressing structural constraints on private investment and job creation. India stand at inflection point were reform in labor markets, judicial systems, and credit markets – it has the opportunity to create millions of quality jobs and sustain its position as the world's fastest-growing major economy.

Uno Minda

Automotive Industry

The automotive industry is a dynamic and highly competitive sector. The automotive industry has a wide range of operations, encompassing all activities related to the development, design, manufacturing, assembly, and sale of vehicles, as well as related spare parts and accessories, distribution and service of vehicles, and financing of the company's vehicles in certain markets. It encompasses everything about vehicles, from cars to trucks, motorcycles, and even electric vehicles.

The key components of the automotive industry are the Original Equipment Manufacturers (OEMs), Auto Component Manufacturers, Dealerships and Distributors, Aftermarket Services, Electric Vehicles (EVs) and Alternative Fuel Vehicles, and Software and Technology Providers. Trend drivers in the automotive industry are the electric revolution, autonomous driving, connected vehicles, sustainability, shared mobility, and digital transformation. Major challenges in the industry include supply chain disruptions, rising raw material prices, regulatory pressures, high R&D costs, and economic cycles.

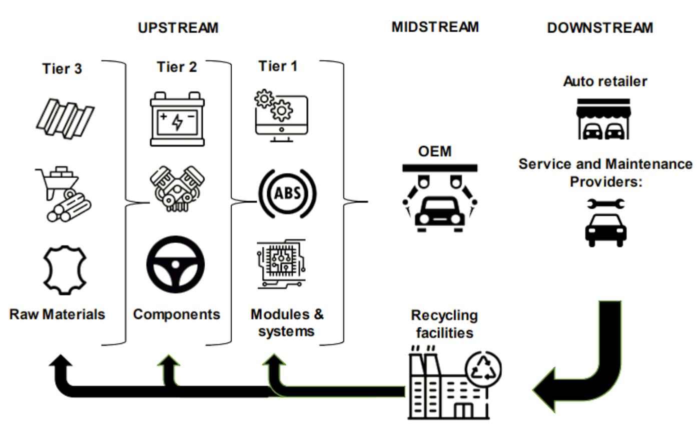
The industry plays a significant role in the global economy, contributing to employment, trade, and technological advancement. It consists of a multi-tiered supplier structure with a high degree of outsourcing and an enormous variety of products.

Automotive Supply chain

In the upstream segment of the automotive value chain, Tier 3 Material Suppliers provide raw materials (metal or plastic). OEMs, Tier 1, and Tier 2 companies all need raw materials, so the Tier 3s supply all levels. Consequently, the line between a Tier 2 supplier and a Tier 3 supplier that sells into Tier 1s is blurry.

While Tier 2 components manufacturers produce various auto parts. Tier 1 Suppliers directly furnish major systems, including software, computer chip, for the vehicle assembly process. Tier 2 suppliers are often experts in their specific domain, but they support a lot of non-automotive customers

Companies that supply parts or systems directly to OEMs are called Tier 1 suppliers. Tier 1 suppliers specialize in making "automotive-grade" hardware. This means hardware that withstands the motion, temperature, and longevity demands of OEMs. These suppliers usually work with a variety of car companies, but they're often tightly coupled with one or two OEMs, and have more of an arms-length relationship with other OEMs.



In the midstream, OEMs design, manufacture, and assemble vehicles. The downstream segment involves dealership and aftermarket services to end users. With the emergence of sustainable and circular business models, recycling facilities recover raw materials and are engaged in remanufacturing, repairing, and
refurbishment processes.

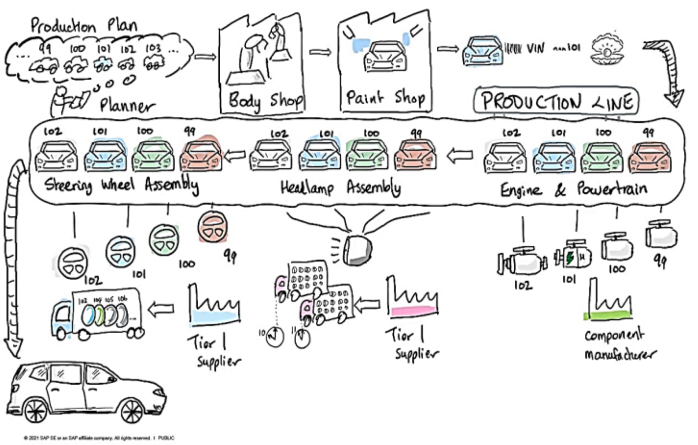
Source: Author's own elaboration., medium

Automotive Value chain

The automotive industry is characterized by a complex, multi-tiered supplier structure with a high degree of outsourcing. Automakers, conduct research, develop vehicle concepts, and design specifications. invest heavily in research and development and process engineering.

Material suppliers provide various raw materials, including steel, textiles, glass, plastics, rubber and chemicals. Sourcing these materials often relies on a mix of domestic and international suppliers. Component specialists manufacture parts according to standardizers' specifications. These can be further categorized as first-tier suppliers, delivering directly to assemblers, and lower-tier suppliers, providing components to other suppliers or integrators.

Integrators, typically (Tier-1) suppliers, design and assemble key modules and systems for final assembly, such as engines and air conditioning systems. The actual production process where components are assembled into finished vehicles.



Marketing and Sales Channels: Strategies and activities aimed at promoting vehicles to consumers, including advertising, dealership networks, and digital sales platforms. Distribution and Logistics: Managing the transportation of finished vehicles from manufacturing plants to dealerships or directly to customers, ensuring timely and cost-effective delivery.

Uno Minda

Global Automotive Industry

The global automotive industry is one of the largest industries worldwide, producing over 70 million vehicles annually and accounting for approx. 50% - 60% of global oil consumption. Contributing around 3% to the world's total GDP. The sector's economic impact is even more noticeable in emerging markets like China and India , where it accounts for around 7% of GDP. The industry support three crucial pillars. Industrial development , mobility and People development.

In 2024, the global automotive industry market size was $3806 billion and is projected to grow at a CAGR of 6.77%, reaching $6863 billion by 2033. Driver of this growth are the Asia pacific dominates the market with largest market share over forecast period and there are two emerging trends that are reshaping the industry. The shift from fossil – fueled Vehicles to electric vehicles (Evs). the rise of connected cars driven by the Internet of things (IoT). Despite the global push for cleaner energy , diesel and petrol will remain relevant until at least the end of the decade. Technological advancement in larger cars and light trucks aim to enhance fuel efficiency.

The sector particularly in emerging nations, jobs creation in construction , mining and tourism , increasing demand for public and personal transportation. The increase in E-commerce has created need for small , medium and large commercial truck for logistics and transportation , with the logistics industry evolving to offer customer centric solutions. Urbanization has boosted the mining and construction sectors, leading to increased demand for technologically sophisticated freight vehicles.

Indian Automotive Industry

The Indian automotive industry one of the largest fastest growing in the world. It account for 45% of the country's manufacturing gross domestic (GDP) and over 7.1% of the country's GDP. Automotive Industry provides direct and indirect employment to about 32 million people in India. Indian Automotive Market is mainly driven by the rising population, increasing disposable income, easy availability of credit and finance to purchase vehicles and supportive government policies.

In 2024, the Indian automotive industry market size was $121 billion and is projected to grow at a CAGR of 8.20%, reaching $246 billion by 2033. Increasing production and sales of EV vehicles in India is expected to boost the growth of this sector during the forecast period. For instance, India is on track to become the largest EV market by 2030, with a total investment opportunity of more than US$ 200 billion over the forecast period. Supportive government policies such as the Make in India Initiative, Production Linked Incentive Scheme, and Automotive Mission Plan are expected to create lucrative opportunities for the market during the forecast period. Additionally, the reduction in Goods and Services Tax (GST) on EVs has made them a more economical choice compared to conventional vehicles.

Despite the fact Indian automotive industry is undergoing significant transformation and disruption in recent years due to changes in consumer preferences, government regulation, and advancement in technology. Additionally, there is growing interest in electric vehicles, with companies investing in research and development to meet the country's emissions standards

Uno Minda

Auto Ancillary industry

The automotive ancillary industry is a vital part of the Indian economy. It accounts for about 2.3% of India's GDP. The industry is intertwined with the automobile industry. The automotive ancillary sector can be divided into nine industries: casting, bearings, batteries, tyres, lubricants, forgings, fasteners, diesel engines and other ancillary parts. Auto ancillary business that depends on the commercial vehicle segment shows a higher level of cyclicality and the automotive sector is heavily influenced by the economic cycle. The auto ancillary business is highly dependent on OEMs (Original Equipment Manufacturers), which is why they have no negotiating power or pricing power. Periods of increasing sales and profit margins are followed by periods of declining sales and profit margins. They are also dependent on suppliers, particularly large metal-producing companies. Auto component manufacturers face intense competition from unorganized players. In fact, auto ancillary players earn the least margins from Indian OEMs compared to the aftermarket and export segments.

To survive, an auto ancillary player must innovate its products; otherwise, global trade wars and the entry of start-ups offering efficient engineering solutions will continue to challenge the industry. The development of a newer range of products that offer customers good value propositions, along with improving productivity and reducing costs in every possible area, is crucial. Any failure by an auto ancillary company to deliver goods "just in time" may result in a loss of market share as well as financial penalties.

Large suppliers gain better bargaining power over OEMs and, in turn, better purchasing power over their suppliers. Companies continuously invest in building new manufacturing plants and expanding existing ones to increase their scale of operations and become reliable partners for OEMs. Investors would appreciate that large auto component manufacturers benefit from economies of scale. A strong market share generally translates into larger business volumes, helping players benefit from economies of scale (through better coverage of overheads) and allowing them to compete more effectively on prices.

The more critical, complex, and technology-intensive the product is, the higher the level of coordination required between the auto ancillary and the OEM, and the greater the pricing power enjoyed by the ancillary. Technology acts as an entry barrier for new companies and also lowers the substitution risk. Technologically complex products enjoy higher profit margins. Besides capacity expansion, acquisitions have been a common strategy for growth pursued by large Indian auto component manufacturers. However, catering to the replacement market requires a large distribution network. The costs incurred in building such a network may not always be justifiable, as buyers in this segment are extremely price-sensitive and may not prioritize brands.

Establishing a significant aftermarket business comes with many challenges:
1.Large investment to create a distribution channel
2.Significant expense on marketing and advertising
3.Intense competition with imports, unorganized players and spurious/duplicate/counterfeit products
4.Highly price-sensitive buyers who are not brand-conscious
5.Large working capital requirements due to inventory stocking and delayed payment cycles
6.Risk of non-recovery of trade receivables

Company Product Portfolio :

Uno Minda

Global Auto Ancillary Industry

The global automotive ancillaries market size was valued at $17 billion in 2024 and is projected to reach $29 billion by 2032, registering a CAGR of 6.6% from 2025 to 2032. Global auto ancillary industry is facing a period of significant transformation, driven by the shift towards electric vehicles (EVs) and the increasing demand for technologically advanced features like ADAS and connected car capabilities. This transformation presents both opportunities and challenges for industry players.

There are several factors that impact the growth of the global auto ancillary market. Factors such as growing demand for high energy density batteries, production of brake pads with low level of copper and heavy metals, growing to drive towards technologically advanced products, wider range of applications for pumps as technology get strong foothold, expansion collaboration mergers and acquisitions among manufacturers to increase market reach, increasing automobile production, rising demand for lithium batteries are boosting the growth of the global auto parts manufacturing market.

The global EV market is expanding rapidly, creating substantial demand for new components such as electric motors, batteries, inverters, and wiring harnesses. Suppliers who can adapt their product portfolios to cater to this demand are well-positioned for growth. Disruptions in recent years have prompted global OEMs to diversify their supply chains away from single-source dependencies. This trend benefits suppliers with a global presence and a strong track record in quality and delivery.

The shift towards EVs requires significant adjustments for suppliers who have traditionally focused on internal combustion engine (ICE) components. The rapid pace of technological innovation in the automotive industry demands continuous investment in R&D and talent acquisition. Geopolitical tensions, natural disasters, and other unforeseen events can disrupt global supply chains. Suppliers need to develop resilient supply chains, diversify their sourcing strategies, and build strong relationships with partners to mitigate these risks. Rising trade tensions and the emergence of regional trade blocs can impact the global flow of automotive components. Suppliers need to stay informed of these changes and adjust their strategies accordingly.

Indian Auto Ancillary Industry

The Indian auto ancillary industry plays pivot roles in the automobile value chain, encompassing both organized and unorganized segment. Indian automotive ancillary industry derives 61% of its revenue from OEMs, 18% from the aftermarket and 21% from exports. North America, which accounts for 32% of total exports, increased by 5%, while Europe and Asia, which account for 33% and 24% of total exports, increased by 12% and growth for Asia remained flat, respectively. The key export items included drive transmission and steering, engine components, body/chassis, suspension and braking etc.

Industry accounted for 2.3% of India's GDP and provided direct employment to more than 1.5 million people. India is the second-largest producer of steel, and it has a competitive advantage in bearings and fasteners due to a large number of players. By FY28, the Indian auto industry aims to invest $7 Bn to boost the localization of advanced components like electric motors and automatic transmissions by reducing imports and leveraging the "China Plus One" trend.

The Indian automotive ancillaries products market size was valued at INR 6.4 trillion in 2024 and is projected to reach INR 10 trillion by 2029, registering a CAGR of 10.67% from 2025 to 2032.The industry benefits from India's huge geographic population distribution. The steadily growing working population and their rising disposable income may be the primary drivers of domestic market growth. The capital expenditure on automotive ancillaries is expected to increase by 30% YOY. Strong demand anticipation, a greater shift toward launching new electric vehicles (EVs) and a large number of investments from the PLI Scheme would be the few factors that would trigger capital expansion growth for the coming fiscal. The transition to EVs is providing significant growth opportunities for auto component suppliers.

The industry is highly fragmented, the shift towards electric vehicles (EVs) presents both opportunities and challenges. While it drives demand for new components like electric motors, wiring harnesses, and inverters, it also poses a risk to suppliers heavily reliant on internal combustion engine (ICE) components While some ICE-focused suppliers may face challenges, many are diversifying into EV components or non-auto sectors.

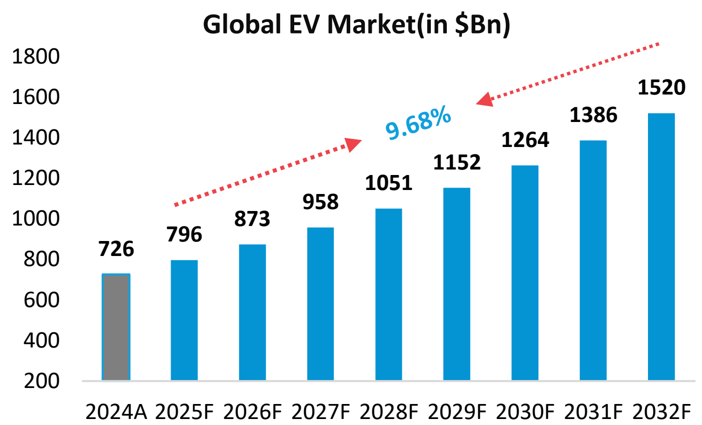
Uno Minda

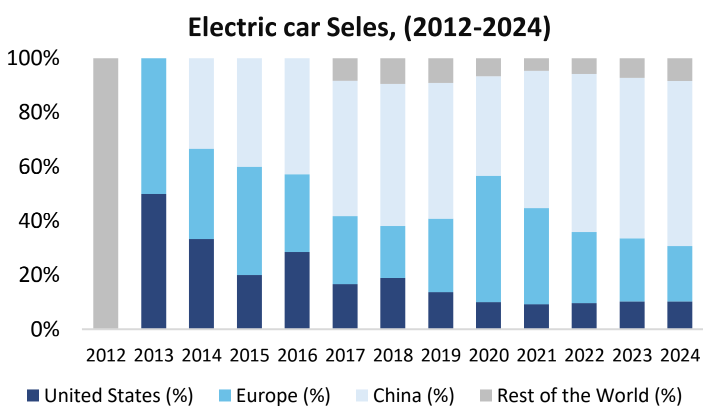
Global EV Market

The global electric vehicle (EV) market is projected to grow from USD 726 billion in 2024 to USD 1520 billion by 2032 at a CAGR of 9.68%. Many factor are collectively driving the electric vehicle market. The Government around the World are focusing and taking actions on measures to control Carbon emissions, one of the way most of the leading Nations Government is taking is by providing subsidies and bringing new policies in order to promote the adoption of Evs. According to the International Energy Agency, sales of EVs might hit 17 million worldwide in the year 2024. That means one in every five cars sold will be an EV.

First, in 2024, 80% of all EV cars were sold in China, Europe, and the United States. The rest of the world combined made up just 6% to 8%. China is the biggest EV manufacturer and seller in the world. In fact, 60% of all EVs sold in 2024 were sold in China. Behind this success is a multi-dimensional approach to encouraging EV adoption. In addition to purchase incentives and subsidy programme's, governments are also instituting various policies targeting the EV charging infrastructure, its accessibility and EV charging payments. These policies are meant to ensure seamless charging experiences for EV drivers and help EV adoption.

However, the EV transition may pose challenges for some suppliers. About 25% of traditional auto component revenues come from fuel system parts that will no longer be needed in EVs. Some companies are already taking steps to diversify their product offerings to meet the needs of the EV market.





Source: IEA, Company Analysis, Market & Market

Indian EV Market

The India Electric Vehicle Market size is estimated at 54.41 billion USD in 2025, and is expected to reach 110.7 billion USD by 2029, growing at a CAGR of 19.44% during the forecast period (2025-2029). Over 50% of 3-wheelers, about 5% of 2-wheelers, and 2% of cars bought in 2024 are EVs. India's Electric Vehicle (EV) sector is experiencing rapid growth, fueled by government incentives, rising environmental concerns, and technological advancements. With initiatives like the Faster Adoption and Manufacturing of Hybrid and Electric Vehicles (FAME) scheme.

India has established an objective to elevate the proportion of Electric Vehicle (EV) sales to 30% in private cars, 70% in commercial vehicles, 40% in buses, and 80% in two-wheelers and three-wheelers by the year 2030. In India, the government introduced the Faster Adoption and Manufacturing of Electric and Hybrid Vehicles (FAME) scheme in 2015, with a modest budget of ₹529 crore. FAME II in 2019, with a much larger budget of ₹10,000 crore. This scheme focused on EV and hybrid vehicle adoption, expanding public transportation, and building charging infrastructure. To boost India's manufacturing capabilities and reduce imports, especially from China, the scheme required that 50% of the parts used in the vehicles be sourced domestically.

In 2024, in many parts of the world, including India, the total cost of ownership of an EV was still higher than that of petrol and diesel cars. But EVs have the advantage of higher fuel efficiency and lower maintenance costs. Subsidies help reduce the cost and make EV ownership more appealing. The growth of the Indian EV market is expected to generate substantial opportunities for the auto ancillary sector. Analysts estimate that the potential market size for EV components in India could reach ₹640-680 billion by 2030

Indian Auto Ancillary

Government Incentives and Schemes

The Indian government is strongly promoting Make In India to encourage domestic production and reduce depends on imports. To incentivize this initiative, the government has implemented favorable policies, including the Faster Adoption and Manufacturing of Hybrid and Electric Vehicles in India (FAME) scheme and Production-Linked Incentive (PLI) schemes. Scheme targets the automobile and auto components industry, offering incentives for advanced technology, green vehicles, and advanced chemistry cells, along with indirectly supporting semiconductors and electronics.

These incentives are driving a significant change in the Indian automotive sector, particularly for auto ancillary companies involved in the electric vehicle (EV) transition. As many as 95 companies have been admitted under the scheme that looks to promote local manufacturing of new technology products. The Government has now also started awarding PLI certifications to OEMs and auto component players. The vehicle scrappage policy in India aims to remove old and poorly maintained vehicle to curb pollution and promote sustainable mobility.

These policies are creating numerous opportunities for auto ancillary companies, higher content per vehicle for suppliers of EV-specific parts, need for lightweight materials in EVs is driving demand for aluminum castings, benefiting Ancillary companies. As of 30 March 2024, a remarkable 15,42,452 electric vehicles have been subsidized under FAME II, with two-wheelers leading the charge at 13,64,929 units, followed by three-wheelers (1,57,171) and four-wheelers (20,352).

Export Opportunities

India emerges as an attractive destination to become a manufacturing destination. Players across industries are restructuring global supply chains to reduce dependence on China in the post-COVID world. Manufacturing companies are increasingly adopting the 'China+1' strategy. Although export from India from less than 10% of the global auto component market, it grown significantly in the last few years, registering at a CAGR of 14.1% between FY 2016-17 and FY 2022-23.

In 2023-24 (April-September), the export value of auto components/parts was estimated at US$ 10.4 Billion contributing to 29% of the industry's turnover. There is potential for strong growth in the export of auto components, going forward, as India gains the spotlight in the global arena. India is currently a hub for sourcing traditional ICE components. An increase in the supply of advanced technology components, including those for electric and alternate fuel vehicles, will result in both an increase in content per vehicle and value addition/margins.

India has the potential to become a major player in the global EV market, particularly in the export of E2Ws. The country's large addressable market, government support, competitive advantages, and growing auto ancillary industry are all factors that could contribute to its success. The Indian government's initiatives, like the Production Linked Incentive (PLI) scheme, are further bolstering the export potential of the auto ancillary industry. These schemes incentivize domestic manufacturing and make Indian companies more competitive in the global market.

Source: Company & peer MDA, Auto report

Digital Transformation

New digital technologies such as artificial intelligence (AI), the Internet of Things (IoT), and cloud computing are changing how vehicles are produced and used. These technologies are enabling the development of new features and functionalities, such as advanced driver-assistance systems (ADAS), autonomous driving capabilities, and connected car services. EVs are inherently more digital than traditional internal combustion engine (ICE) vehicles, requiring sophisticated software and electronics for battery management, powertrain control, and other functions. This shift is driving the demand for new digital skills and capabilities within the automotive industry.

India's robotics and industrial automation framework represent a critical driver of growth in the manufacturing sector, projected to reach $25 billion by CY 2025. This digital revolution extend across the entire value chain, driving efficiency, performance. Consumers are increasingly demanding digital features and services in their vehicles. Software is becoming an increasingly important part of the vehicle, with estimates suggesting that software value share in a car could reach over 40% by 2030.

The digital transformation is creating a demand for new skills in the automotive workforce. These skills include software development, data analytics, cybersecurity, and AI. Companies that embrace digital technologies and adapt their business models will be well-positioned to succeed in this new landscape.

Source: Company & peer MDA, Auto report

Aftermarket Expansion

The automotive aftermarket, also known as the replacement market, is a significant segment of the auto ancillary industry. This market involves the sale of spare parts, accessories, and services for the repair and maintenance of existing vehicles. The sources offer several insights into this market. India's auto component unorganized industry consist of low-valued items and mostly serves the aftermarket category. The aftermarket for auto components grew by 10.0% during FY24 reaching Rs. 9.38 lakh crore (US$ 11.3 billion).

Aftermarket provides a more stable revenue stream compared to OEM sales, which are directly linked to new vehicle production. This is because demand in the aftermarket is driven by the need to repair and maintain existing vehicles, making it less susceptible to fluctuations in new vehicle sales. Generally, sales in the aftermarket command higher margins than OEM sales. Aftermarket buyers are often willing to pay a premium for quality and reliability, especially for safety-critical components.

Despite the potential for higher margins, aftermarket buyers are often very price-conscious. A strong distribution network is essential to reach aftermarket customers. The shift towards EVs will also require aftermarket players to adapt their services and expertise. It provides the potential for stable revenue and higher margins, but companies need to navigate price sensitivity, build a robust distribution network, and adapt to the evolving demands brought about by the EV transition.

Earnings Analysis Q3FY'25

Financial Performance FY24:

- Q3 revenue grew by 14% to Rs. 5,056 crores; consolidated revenue grew by 19% to Rs. 4,184 crores.
- EBITDA for Q3 reached Rs. 457 crores, a 20% year-on-year increase; EBITDA margin improved to 10.9%.
- Profit after tax increased by 21% year-on-year to Rs. "233" crores in Q3.
- For 9 months, consolidated revenue grew by 20% to Rs. 12,246 crores; EBITDA grew by 21% to Rs. 1,347 crores; profit after tax grew by 15% to Rs. 677 crores.

Segment Performance:

- Switching Systems revenue grew by 20% to Rs. 1,045 crores, contributing 25% to consolidated revenues.
- Lighting business revenue grew by 15% to Rs. 982 crores, contributing 24% to consolidated revenues.
- Casting business revenue grew by 13% to Rs. 768 crores, contributing 18% to consolidated revenues.
- Seating business revenue was Rs. 273 crores, contributing 7% to consolidated revenues, with exports impacted by the European market.
- Acoustics business revenue was Rs. 184 crores, contributing 4% to consolidated revenues, impacted by the European auto industry downturn.
- Other product businesses revenue was Rs. 933 crores, contributing 22% to overall topline, with strong performance in controllers, sensors, and ADAS.

Strategic Developments:

- Q3 revenue grew by 14% to Rs. 5,056 crores; consolidated revenue grew by 19% to Rs. 4,184 crores.
- EBITDA for Q3 reached Rs. 457 crores, a 20% year-on-year increase; EBITDA margin improved to 10.9%.
- Profit after tax increased by 21% year-on-year to Rs. "233" crores in Q3.
- For 9 months, consolidated revenue grew by 20% to Rs. 12,246 crores; EBITDA grew by 21% to Rs. 1,347 crores; profit after tax grew by 15% to Rs. 677 crores.

Capacity Expansion and CAPEX:

- Approved CAPEX of Rs. 72 crores for aluminum die casting plant expansion in Hosur.
- Expanding four-wheel alloy wheel facility in Bawal by additional 30K capacity (commissioning in Q4 FY25).
- Construction progressing for new Greenfield plant at IMT Kharkhoda (120K wheels per month) and 2 million alloy wheel plant for two-wheelers at Supa, Maharashtra.
- Total capital expenditure, including land bank, for the 9-month period was Rs. 1,324 crores, with Rs. 340 crores spent on land bank.
- Targeting EBITDA margins of 11% plus/minus 50 basis points, with expectations for improvement as new capacities come online.

Electric Vehicles (EV) Focus:

- Revenue from EV two-wheeler OEMs was Rs. 238 crores in Q3.
- Supplies also being made to e-three-wheelers (Rs. 74 crores) and e-four-wheelers.
- Secured additional order for 3.3 kilowatt chargers for EV PV model from a Japanese OEM.

Challenges:

- The commercial vehicle segment continues to face sluggish demand, affecting overall production volumes.
- European operations experiencing headwinds, with a cautious outlook on demand recovery in the near term.

Management Commentary:

- Management conveys optimism about the medium to long-term outlook of the domestic auto industry, driven by innovation, sustainability, and a favorable economic environment. They highlight Uno Minda's strategic positioning through continuous investment in R&D and key resources to capitalize on growth opportunities, indicating a confident outlook.
- Increase in income tax exemption limit to 12 lakhs is expected to boost private consumption and positively impact automotive demand.
- Government focus on enhancing both supply and demand for the EV industry through various schemes and incentives.

Mr. Navin Paul

Uno Minda

Commentary on management

The Uno Minda Group, founded by the late Shadi Lal Minda, is currently led by his son, Mr. Nirmal Kumar Minda, who serves as the Chairman & Managing Director. At 65 years of age, Mr. Nirmal Kumar Minda has over four decades of experience in the auto components sector and has successfully carried forward his father's legacy. Mr. Ravi Mehra, who joined the group in 1995, serves as the Managing Director and Head. Recently, Mr. Vivek Jindal was appointed as the Whole-Time Director after being associated with the Minda Group for the past 4-5 years.

Other key members of the Board of Directors (BOD) include Mr. Sunil Bohra, Mr. Rajeev Gandotra, and Mr. Amit Jain, who have been with the company for the last 4-5 years, as well as Mr. Naveesh Garg, who has been with the company for 12 years, and Mr. Rakesh Kher, who joined in 2004. Recently, in 2024, Mr. Ramesh KS, Mr. AG Giridharan, and Mr. Rakesh Mehta have also joined the management team, further strengthening the leadership at Uno Minda.

The company has a strong and experienced management team with technical expertise. Among the independent directors, half have diversified industry backgrounds, while the other half possess significant experience in the automotive and automobile sectors. Based on publicly available data, there appear to be no notable political connections between the leadership or independent directors and any national or regional political parties.

Additionally, Mr. Anand Kumar Minda, a Non-Executive Director, is the cousin of Mr. Nirmal Kumar Minda. Additionally, Mr. Vivek Jindal, who initially served as a Non-Executive Director of the company, was later appointed as the Whole-Time Director and CEO of the Lighting and Acoustics Systems Domain – 1. His qualifications and experience make him well-suited for this role. It is also noteworthy that Mr. Vivek Jindal is the son-in-law of Mr. Nirmal Kumar Minda..

Board of Director (BOD) Composition and Efficiency :

The Board of Directors (BOD) includes a balanced mix of Independent Directors, Industry Experts, Strategists, Mentors, and Finance and Legal Experts, in compliance with legal requirements. The BOD's efficiency is reflected in their active participation in various key meetings held in FY23-24.

Uno Minda

Commentary on management

Management Remuneration :

During FY24, the company incurred managerial Remuneration of 45.36 Crores, Compared to 38.46 Crores in FY23 (67.0% increase in YoY Basis). The remuneration of the chairman of the company is 952 times of the median remuneration of the employee. The remuneration of KMP of the company is higher than that of the other peer companies. However, this comparison is mostly done with top KMP of the companies.

The increase in KMP remuneration is in line with the company's sales growth of 30% and net profit growth of 66%. However, the growth in median employee remuneration (excluding the last two years) has been lower compared to the growth in KMP remuneration last few years.

Revenue :

The company posted a revenue of INR 14,031 crores in CY2024. Over the past three years, revenue has grown at a CAGR of 30%, and at 25% over the last year. Company's business segment are the switches, lighting, Acoustics, Seating, Casting and After market. Company holds a 60%+ market share in 2-wheeler segment and almost 50% in the 4-wheeler segment. Company is working to it's market share in lightning business from the 14-15% to 19-20% in the next 4 to 5 years. Company 4-wheeler alloy wheel business has a market share more than 45%. Acoustic, the company have a 60%+ market share. EV segment is experiencing a lot of growth but market still evolving.

Management has aim to revenue growth at least 1.5 times at rate of industry volume growth medium to long term. This growth derived by number of factors New product lunches, capacity expansions, increasing content per vehicle etc. Management are optimistic about the demand scenario of domestic and international market. Company had previously set a target of INR 1,500 crores of revenue by FY'26. from its joint venture with FRIOW, which is focused on EV systems. company aim to achieve this target next few years in the seating business. Also, the company anticipate double its lighting business revenue in the next few years. Company expect to reach the 3000 crores revenue for their EV business partnership with inovance. Company expect that their alloy wheel business grow 4x over the next 8 to 10 years.

The commissioning of new plants and capacity expansions in various segments, including switches, lighting and alloy wheels, is expected to boost revenues. The company also aims to consolidate operations by building bigger plants on newly acquired land. New plants and businesses may not deliver expected returns in the initial years of operation. also, the company faces competition in various segment which may impact margins.

The analyst consensus projects a revenue of ₹16,795 crores for FY25, reflecting a 19.7% growth over the FY24 revenue of ₹14,031 crores. Furthermore, the consensus estimates suggest an annual growth rate of 15% to 18% for FY26 and FY27. Based on these projections, revenues are expected to reach approximately ₹19,975 crores in FY26 and ₹23,772 crores in FY27, assuming a midpoint growth rate of 19%. These consistent growth expectations highlight a strong upward trajectory in revenue performance over the forecast period.

The company's gross margins overall ranging between 35.7% and 36.7%, but last 2 to 3 years margins have been marginally decreased. This declined because of increase in aluminum prices and higher energy cost increase in gas prices are impacted the casting business. Fluctuation in commodity price in market affects directly or indirectly the price of raw material and components used by the Company. The raw materials price increase because of conflict of Russia and Ukraine war.Comapany major raw materials are the Aluminium,steel, LPG gas and plastic. New business and new plant have lower margins initially specially in to first two to three years

Historically, the company has posted gross margins between 35% and 38%, with a median of 36.5% over the past decade. Based on our research, the gross margins for Auto part in India averaged 38.34%. In the global emerging market Auto part, margins were 17.72%, while the global market average was 16.86%.

Gross margin are decreased last 3 years and the reason was the high raw material cost aluminum price shoot up and the high LPG cost also shoot up.

During FY24, Company has reported constant EBITDA margin of 11%. Company has maintain the margins range between 11% to 12% for the last few years. company's grows margin are marginal decrease but EBITDA margins are constant. The reason for 11% maintain EBITDA margin Because of reduce the misc. cost and employee cost. The company has stated that it expects to be at the upper end of their 11% plus or minus 0.5% margin guidance. There is an expectation of management that as new plants ramp up and stabilize, margins will improve more achieve operational efficiencies.

Basis our research, we have identified that historically, SG&A expenses is 26% of revenue. Where main expenses are the employ cost that constitute 13.2% of Total SG&A expenses. When few expenses Selling and Administration cost, General and administration cost , power and fuel cost and Other and Misc. cost these five key expenses are directly linked with sales.

We assumed ,total SG&A expenses to remain at 26% level as percentage of revenue which is almost align with street estimate and management guidance.

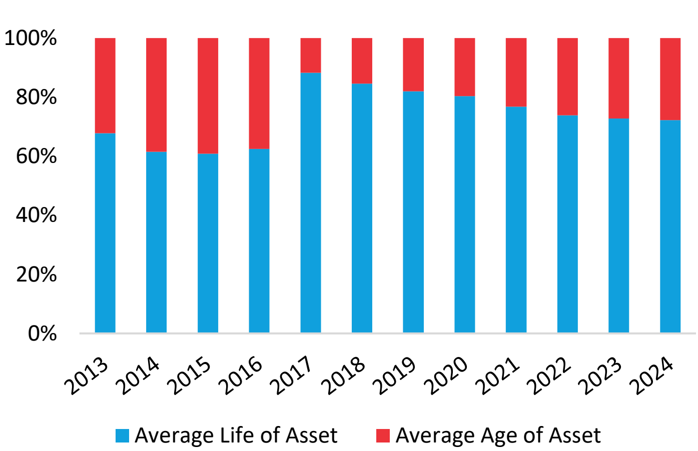
Uno Minda

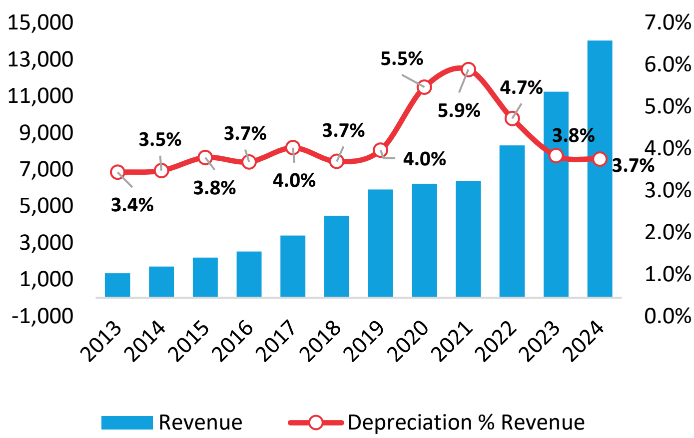
In CY24, depreciation increased by 22.3%, reaching INR 526 crore compared to INR 430 crore in CY23. This rise was primarily due to company in the capex cycle and company commit more capex plan so depreciation rise in the future more. Depreciation increase in line with the capitalization of new projects.

Over the last few years, company's revenue are highly increase in comparison of depreciation and fixed assets, Although depreciation and fixed asset also increases but moderately. The Depreciation & Amortization as a percentage of revenue is expected to remain stable at around 3.8%-4.1%, reflecting efficient revenue generation from new assets.

Life of Assets V/S Age of Assets



Depreciation % Revenue



Capex Analysis :

In the last two years, the company has significant growth capex, with around ₹527 crore spent in FY2023 and ₹567 crore in FY2024. These investments reflect the company's focus on expanding its operations and positioning itself for future growth.

For FY2025, the company has planned an ambitious capex of ₹1300-14000 crore. This expenditure is primarily aimed at greenfield expansions. A management guidance significant portion, 850 crore growth capex and 450 crore maintenance capex, will be used for a Sunproof plant 63 crore project in Bawal, Additionally, it will be commissioning a new 4-wheeler lighting plant at Khed in Q3FY25. Furthermore, it has expanded the 4-wheeler (alloy wheel) Bawal facility by an additional 30k capacities, scheduled for commissioning in H2FY25 and has begun work on another 30k capacity at the same site. Management has a significant future plan for the Alloy wheel and lightning. 4W Alloy wheel 5 years plan 542 Crore and lightning also the 5 years commenced new facility 500 crore. Airbags Q1 FY27 new greenfield facility in Harohalli. Major project pipeline are the Alloy Wheels (₹542 Cr), Lighting (₹500 Cr), Airbags (₹283 Cr), and Sunroof (₹63 Cr).

Capex guidance for FY25 at ₹ 1,300 to 1,400 crores, excluding land bank expenditure of ₹ 600 to ₹ 700 crores with ₹ 300 crores already spend in H1FY25 for Kharkhoda, Hosur and Bawal. The CAPEX for H1 FY25 was 840 crore (including land bank), and net debt stood at 1800 Crore. Management guidance on the financing is the growth capex is financed from business cash flows, while land bank investments have resulted in incremental debt. increased borrowing has been used fund to capex, land acquisitions, and working capital.

During the terminal year, capital expenditure is expected to match depreciation (100% maintenance), signalling a period of moderate but stable growth.

Trade Receivables Analysis:

Historically, the company has maintained receivables at approximately 15% of revenue. The median receivable turnover ratio is 6.55x, translating to 56 receivable days, which is higher few day with the peers in the market who maintain receivable days between 45-50 days. This also aligns with the company's 10-year historical average of 56 days. Consensus estimates projecting receivable days to remain at 55 to 60 days. Also, Receivable turnover ratio has been in the range between median 7.11x to Average 7.18x.

The company has a steady receivables process , which ensures that receivable levels remain within normal ranges. As of March 31, 2024, ~80% is not due, and ~19% of receivables were due for less than six months. The company is exposed to credit risk from its primary customers are major automobile manufactures. But, all the customer have good credit ratings. However, company major customer are reputed big firm, default risk are less because of that caution.

Given this historical consistency and industry alignment, we assume that the company's receivable levels will remain flat at 56 days going forward.

Inventory Analysis:

The company is maintained inventory level in line with cost of good sold and revenue Growth. But historically, exception 2018 when inventory level are highly increase due to consolidation of 4W switch business mindarika pvt Ltd. The company inventory levels are ~9.4% of revenue and ~15.3% of COGS.

The median inventory turnover ratio (COGS) are 6.53x and last 4-5 years ratio are marginally decrease due to decrease in inventory. The peer company in the market maintains inventory of 60 days which is higher than 10 year historical inventory days of the company. The reason, Company has high SKUs in inventory level compare to peers.

further , street estimates suggest the inventory levels to remain the 30 to 35 days from existing inventory days.

Payable Analysis:

Company payables are inconsistent with the COGS and revenue. In 2024, the payables were reported to a normal level of 80 days. Trade payable is a median of ~23% of COGS and ~15% of revenue.

The peers companies in the market payables are 100 Days level, which is Lower than 10 year historical Payable days of the company. Further, street estimates suggest the payable levels to ~80-98 suggest.

In absence of management guidance and basis our research, we assume the payable days to remain at ~84-90 days

Borrowing Analysis:

As of FY24, long-term borrowing stood at 696 Crores and short-term borrowing stood at 570 Crores. Last, two years short-term borrowing more increase as compare to long-term borrowing. The reason is the expansion in the existing facility, land purchase and working capital. Company capex plan for FY25 are estimated to be between 1300-1400 Crores, excluding land acquisition. Approximately INR 600-700 crores was spent on land acquisitions.

The debt-to-equity ratio (D/E) is consistent at 0.3x, Debt to Capital ratio at 0.2x, Debt to Assets ratio at 0.1x, and Debt to EBITDA ration at 0.8x. Management statement on financing that Sustaining and growth CAPEX has been financed from business cash flows, while land bank expenditure has resulted in incremental debt. We assume, the LT debt to grow by 4-5% for the next three year due to higher capex and eventually grow at 1% for the future. Also, the ST debt to grow at 3-5% of the revenue in future.
